TITLE : PORTABLE ELECTRONIC DEVICE

ABSTRACT : PROBLEM TO BE SOLVED: To improve the operating convenience by suspending the portable electronic device main body from the neck of the user with a suspending means such as a neck strap and mounting an earphone, a microphone or an actuator forming a vibrator or the like to the suspending means.

SOLUTION: A neck strap 16 fitted to the portable telephone set 10 is put on the neck of the user so as to allow the portable telephone set 10 to hang down from the neck. Then an earphone 17 fitted to the neck strap 16 is put on the ear to allow the user to use the telephone set. Furthermore, a microphone 18 fitted in advance to the neck strap 16 is placed at a diagonally lower position of the mouth being an optimum position in use when the portable telephone set 10 is suspended by the neck strap 16. Furthermore, an actuator 19 acting like informing the arrival of an incoming call is placed around the neck, e.g. at the rear side of the neck, and when an incoming call is received, the actuator 19 is vibrated to inform the arrival of the call to the user.
